```
The invention relates to an isolated polypeptide comprising no more than CC 11-542 amino acids of ADB13563 comprising a sequence ADB14487. The CC peptides comprise a fragment ADB13563 of that contain naturally processed CC T-cell epitopes for 3 class I major histocompatibility complex (MIC) CC cDNA, one of 648 disclosed as new. Also included are nucleic acids cencoding the proteins and peptides, expression vectors, a host cell transformed with the vector, an isolated antibody (or antigen binding CC fragment) that specifically binds to the protein or peptide, detecting the presence of a cancer in a patient (comprising contacting a patient CC sample with a binding agent that binds to the peptides or a polypeptide coff reagment and comparing the amount of polypeptide that binds to the agent and comparing the amount of polypeptide that binds to the agent and comparing the presence of cancer), a fusion protein comprising the peptides or proteins, stimulating or expanding T cells specific for a tumour protein comprising contacting T cells with the peptides or the isolated T cell population, treating prostate cancer in a patient and treating prostate cancer in a patient comprising contacting the peptides, nucleic acids, antibodies or compounds, determining the presence of a cancer in a patient with the peptides or antigen presenting cells that express (the peptides so that the T cells proliferate, and administering the peptides (or an oligonucleotide that hybridises to nucleic acid encoding them), is used to detect the concilean presenting cells to the patient. The peptides (or an oligonucleotide, or anciden presenting colls expressing the nucleic acid, are used to concer in a patient comprising the peptides, or an oligonucleotide, or anciden acids, antibodies, fusion proteins, T cell populations or antigen concerns.

                                                                                           The present invention relates to a method of prognosticating metastasis in a breast cancer patient involves identifying differential modulation of each gene relative to the expression of the same genes in a normal population in combination of genes. The invention is useful for prognosticating breast cancer in a patient. The present sequence is huma STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human STEAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAD63162;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAD63162
                                                                                                                                                                                                                            prognosticating metastasis in a breast cancer patient comprises identifying differential modulation of each gene relative to the expression of the same genes in a normal population in combination
                                                                                                                                                                                                                                                                                                                                                                                                  09-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                       US2003190656-A1

The method comprising identifying differential modulation of each gene (relative to the expression of the same genes in a normal population) in a combination of genes. The method, diagnostic portfolio and the kit are useful in diagnosing cancer. The method may also be used for determining gene expression profiles. The present sequence is human STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diagnosing cancer comprises identifying differential modulation gene (relative to the expression of the same genes in a normal population) in a combination of genes.

        The invention relates to human prostate-specific polypeptides and the polymuclectides encoding them. The invention also relates to an isolated antibody or its antigen-binding fragment that specifically binds a polypeptide of the invention, a method of detecting cancer in a patient comprising contacting a biological sample of the patient with an agent that binds a prostate-specific polypeptide and comparing the amount of bound polypeptide compared to a predetermined cut-off value and a fusion protein comprising a prostate-specific polypeptide. The sequences of the invention are used to diagnose and treat cancer, particularly prostate cancer. This sequence represents CDNA encoding a human prostate-specific polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; prostate-specific cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human
                                                                                                                                                                                                                                                                    New polynucleotides encoding prostate specific a human prostate tumor cDNA library are useful cancer particularly prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-MAY-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sapiens

whose expression is upregulated or downregulated in specific cancers or cother diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a content by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The nucleic acid of the invention, antibodies which specifically bind a culleic acid of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may calso be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 1195;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acids and proteins (ADN38683-ADN40064) CC whose expression is upregulated or downregulated in specific cancers or cother diseases such as anglogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a cc patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The cc invention also relates to expression vectors and host cells comprising a cc nucleic acid of the invention; antibodies which specifically bind a cc polypeptide of the invention; antibodies which specifically bind a cc polypeptide of the invention; use of such antibodies for drug targeting; cc and methods of screening for modulators of activity or expression of the polypeptides and mucleic acids. The nucleic acids polypeptides, can aribodies and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, catherosclerosis, inflammatory diseases, autoimmune diseases, retinal convascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present expressents a nucleic acid sequence of the invention.

The invention relates to a method of selecting a portfolio of markers (C (e.g., genes) for use in a diagnostic parameters; (b) establishing a relationship among the diagnostic parameters; (b) establishing a relationship among the diagnostic parameters so that they are optimised; and (c) selecting CC the diagnostic parameters so that they are optimised; and (c) selecting CC application. The diagnostic parameters can include a measure of the relationship the measurement of the degree of gene, a measure of the variation in CC the measurement of the degree of gene expression, and the relationship between the diagnostic and discriminating parameters can be a mean CC variance relationship. The method further comprises the application of a comprise the application of a performing the method of the invention, and a diagnostic portfolio comprising genes selected according to the method. The method of the invention, and a diagnostic portfolio comprising gene expression. The method of the invention can be used in conjunction with any method for determining the colorectal or lung cancer). By grouping these markers into portfolios, the expression of relevant cells as well as protein-based methods of the expression of multiple genes (e.g., breast, prostate, ovarian, colorectal or lung cancer). By grouping these markers into portfolios, the most reliable results can be obtained with the smallest number of comportant in multiple-step assays such as nucleic amplification methods. The present sequence represents a human diagnostic marker gene that is a comportant in multiple assays such as nucleic amplification methods. The present sequence represents a human diagnostic marker gene that is a comportant in maltiple-step assays such as nucleic marker gene that is a comportant in maltiple and prognosing diseases for screening for prostate, or prostate, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Selecting a portfolio of markers useful in diagnostic applications comprises defining diagnostic parameters and establishing a relationship among the diagnostic parameters that identifies an optimized portfolio of markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2003-815043/77.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-MAR-2002; 2002US-0368790P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of human tumour-associated antigenic target (TAT) polymucleotide and polypeptide sequences. Also disclosed is an antibody that binds to a TAT polypeptide. The antibody is a monoclonal antibody, an antibody fragment, a chimeric antibody or a humanised antibody. It is conjugated to a growth inhibitory agent. It is produced in bacteria or in CHO cells and induces death of a cell to which it binds. The antibody is useful for preparing a composition for diagnosing or treating tumours and cancer. The present sequence represents a human TAT cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody that binds to a tumor-associated antigenic target polypeptide, useful for preparing a composition for diagnosing treating cancer.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

APPLICANT: Vedvick, Thomas S.

APPLICANT: Li, Samuel

APPLICANT: Li, Samuel

APPLICANT: Skeiky, Yasir A.W.

APPLICANT: Mang, Aijun

APPLICANT: Hepler, William

APPLICANT: Hepler, William

APPLICANT: Negley, Yasir A.W.

APPLICANT: Negley, Yasir A.W.

APPLICANT: David Compositions and METHOD

TITLE OF INVENTION: DIAGNOSIS OF PROSTATE C

FILE REFERENCE: 210121.427C20

CURRENT FILING DATE: 2000-10-02

NUMBER OF SEQ ID NOS: 895

SOPTMARE: PastSEQ for Windows Version 3.0

SEQ ID NO 878

LENGTH: 1195
                                                                                                                                                                                                                                                                                                                                                                                                                              δ
